

Figure 1. A schematic diagram illustrating the experimental design. The figure shows a sequence of events starting from a participant's arrival at the laboratory. The participant is first informed about the experiment and then given a practice trial. This is followed by three main phases: Phase 1 (Baseline), Phase 2 (Training), and Phase 3 (Testing). In Phase 1, the participant performs a task without feedback. In Phase 2, the participant receives feedback after each trial. In Phase 3, the participant performs the task again without feedback. The diagram also indicates the timing of the feedback and the duration of each phase.
